

The *Perspectives in Intelligence Magazine* has become a great challenge for the Bg School of Intelligence and Counterintelligence. Ricardo Charry Solano, that is why, every time the process of building a new number begins, it is a matter of concern to achieve this new course, since, in the academic concert, it becomes increasingly complex to be able to collect the necessary material for the structuring of each new issue of a magazine.

For these reasons, I am proud today to be able to present and make available to the national and international academic community, volume 10, No. 19 of the *Perspectives in Intelligence* magazine, also, we made this presentation with the humility of the duty fulfilled, since, It is not an easy way to go and as we move forward, we overcome obstacles, thus achieving the fulfillment of new milestones.

In this way, we are gratified to show the results of the student discussions that take place within the research centers of the academic institutions, and, which become an intense, dense, but very enriching dialogue in light of the new research techniques and methods, that is, leads our researchers to strive to be part of this type of dynamics, either from within the groups and centers of thought, thus achieving, at any time, seeking improvement processes , in form and academic content of these publications.

In this new issue of the journal, the works and research advances of academics and researchers are presented, which show through their work, relevant topics on knowledge areas such as new threats to national security; the growth of the Bacrim; some historical aspects about intelligence weapon; cyberwar strategies; mining activity during the post-agreement period; paradoxes of the preservation of the Sierra de la Macarena; a model for the representation of capital theory; the obligation of the colombian State with the venezuelan migrants; the role of the colombian National Army in the construction of regional integration scenarios; a review of the state of the art of radio frequency inhibitor devices, among others.

In the same way, we expect this academic production to raise new discussion scenarios, and give rise to incentives in each of the researchers to continue in the debate within the national and international scientific community, thus generating dynamics in the process approach to knowledge and the various questions that this new production generates, situation, which at any time will be necessary to achieve the objective of placing this magazine in the best indexing standards.

Likewise, I thank and invite the researchers and the scientific community to continue contributing with their advances, articles and knowledge in these topics of interest, thus seeking to meet the student and scientific needs of the national and international academic community.
